(An Autonomous Institute affiliated to Visvesvaraya Technological University, Belagavi)

SEMESTER END EXAMINATION QUESTION PAPER**Second Semester MCA Degree Examination**

Regular / Make-up / Arrears / Supplementary

JAVA PROGRAMMING

Time: 3 hrs.

Max. Marks: 100

Note: I. Answer FIVE full questions, choosing ONE full question from each module.

Q. No	Module – 1	Marks	CO, RBT
1a.	How Java Programming overcomes the limitation of 'C' Programming? Justify your answer.	10	CO1, K2
b.	Develop a Java Class illustrates the concept of data abstraction and encapsulation. Trace the same.	10	CO1, K2
OR			
2a.	Exemplify the object oriented programming principles of JAVA.	10	CO1, K2
b.	How to call super class constructors and super class members using super? Demonstrate with an example.	10	CO1, K2
Module – 2			
3a.	How an exception handling is more useful in building error free Java applications? Justify your views with a suitable Java code.	10	CO2, K2
b.	Differentiate between throw versus throws and final versus finally with a suitable example.	10	CO2, K2
OR			
4a.	Demonstrate the implementing concepts of packages and interfaces in Java.	10	CO2, K2
b.	Develop a Java class for small finance application and handle suitable exception handling.	10	CO2, K2
Module – 3			
5a.	Exemplify how inter-thread communication can be achieved in multithreading using producer and consumer problem	10	CO3, K2
b.	With neat diagram, discuss in detail of the life cycle of Java Thread.	10	CO3, K3
OR			

6a.	Construct a Java program to create multiple threads in Java by implementing runnable interface.	10	CO3, K2
b.	Define Java enumeration? Write a Java program to create an enumeration Day of Week with seven values SUNDAY through SATURDAY, Add a method isworkday() to the DayofWeek class that returns true if the value of which it is called is MONDAY through FRIDAY, otherwise false.	10	CO3, K3
Module – 4			
7a.	List and explain the methods involved in the servlet life cycle.	10	CO4, K2
b.	Apply the Java Servlet to demonstrate a servlet program to check whether the session is new or old.	10	CO4, K2
OR			
8a.	List all the attributes of JSP page directive tag and explain any four with an example for each.	10	CO4, K2
b.	Write a JSP program to generate sum of even numbers between 1 and 20.	10	CO4, K2
Module – 5			
9a.	In detail, discuss the JDBC life cycle with a snippet code.	10	CO5, K2
b.	Develop a Java code to do validation of user credentials against the stored values in the database.	10	CO5, K2
OR			
10a.	With a neat diagram, explain the states of life cycle of a stateless session Bean.	10	CO5, K2
b.	Write short notes on i. Entity Java Bean ii. Session Bean iii. Message Driven Bean	10	CO5, K2

Course Outcomes (COs):

COs	At the end of the course, the student will be able to
CO-1	Demonstrate the basic programming constructs of Java and OOP concepts to develop Java applications.
CO-2	Illustrate the concepts of generalization and run time polymorphism to develop reusable components.
CO-3	Exemplify the usage of Multithreading in building efficient applications.
CO-4	Build web applications using Servlets and JSP.
CO-5	Design applications using JDBC and Enterprise Java Beans.
K1- Remembering K2 - Understanding K3 – Applying K4- Analyzing K5 - Evaluating K6 -Creating	

“Success is the progressive realization of a worthy goal.”

DESCRIPTIVE QUESTIONS PATTERN

COURSE CODE: 22MCA204 COURSE NAME: Java Programming
Module-I

Q. No	Scheme and Solutions	Marks				
Q1a)	<p>Listing C - programming features — 05M.</p> <p>Justification how Java overcome limitation of C programming — 05M</p> <p><u>C Supports</u></p> <ul style="list-style-type: none">— Procedural language— compiler dependent— Supports structs, union, pointers etc. <p><u>Java supports</u></p> <ul style="list-style-type: none">— oops features— Garbage collections— String handling— multithreading etc.	10M				
Q1b)	<p>coding of each — 02 x 05M</p> <table><tr><th>Data abstraction</th><th>Encapsulation</th></tr><tr><td><pre>abstract class shape { String color; abstract double area(); public shape(String color) { this.color = color; } } class circle extends shape { double radius; public circle(String clr, double r) { super(clr); this.radius = r; } }</pre></td><td><pre>class Encap { private String name; public String getName() { return name; } public void setName(String newName) { name = newName; } } public class Demo { public static void main() { Encap obj = new Encap(); obj.setName("BMSIT"); System.out.println("name is " + obj.getName()); } }</pre></td></tr></table>	Data abstraction	Encapsulation	<pre>abstract class shape { String color; abstract double area(); public shape(String color) { this.color = color; } } class circle extends shape { double radius; public circle(String clr, double r) { super(clr); this.radius = r; } }</pre>	<pre>class Encap { private String name; public String getName() { return name; } public void setName(String newName) { name = newName; } } public class Demo { public static void main() { Encap obj = new Encap(); obj.setName("BMSIT"); System.out.println("name is " + obj.getName()); } }</pre>	10M
Data abstraction	Encapsulation
